Risk Control Strategies	<ul> <li>TRACKING ERROR RISK</li> <li>While the objective of the Scheme is to closely track the price of Physical Silver, the performance may not be commensurate with the Price of Silver on any given day or over any given period. Such variations are commonly referred to as the tracking error.</li> <li>Tracking errors may cause the scheme to generate returns which are not in line with the performance of the underlying benchmark and may arise from a variety of factors including but not limited to: <ul> <li>Any delay experienced in the purchase or sale of Silver due to: <ul> <li>Belay in realization of sale proceeds,</li> <li>Creating a lot size to buy the required amount of silver.</li> </ul> </li> <li>The charging of expenses to the scheme including investment management fees, custodian fees, taxes, levies, etc.</li> <li>The potential for trades to fail, which may result in the Scheme not having acquired silver at a price necessary to track the benchmark.</li> <li>The scheme may buy or sell silver at different points of time during the trading session at the then prevailing prices which may not correspond to its closing prices.</li> <li>Disinvestments to meet redemptions, recurring expenses etc.</li> </ul> </li> <li>AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal circumstances, such tracking errors are not expected to exceed 2% per annum. However, this may vary due to the reasons mentioned above or any other reasons that may arise and particularly when the markets are very volatile. However, there can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Underlying benchmark.</li> </ul>
