	^The total exposure related to option premium paid shall not exceed 20% of the net assets of the Scheme. Moreover, this upper limit of 20%, for investments in options premium, if any, shall be applicable only at the time of investment. If due to market actions the value of options appreciates/ depreciates resulting in breach of the limit of 20%, the fund manager may or may not rebalance the portfolio and may run with the ongoing exposure. However, if the fund manager sells the option before expiry of the contract, the reinvestment, if any, would be subject to the maximum 20% limit on options premium.			
	The Options Premium offers the actual equity market exposure. However, the cumulative gros exposure through equity, debt and derivatives shall not exceed 100% of the net assets of the scheme For this purpose, cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.

It must be clearly understood that the percentages stated above can vary substantially depending upon the perception of the Investment Manager, the intention being at all times to seek to protect the interests of the unit holders. Such changes in the investment pattern will be for short term and defensive considerations. However, due to market conditions, the AMC may invest beyond the range set out above. Such deviations shall normally be for a short-term purpose only, for defensive considerations and the intention being at all times to protect the interests of the Unit Holders. The Fund Manager shall rebalance the portfolio within 30 days from the date of deviation to bring it in line with the asset allocation patterm as indicated in this SID. Further, in case the rebalancing is not done within the specified period, justification for the same shall be provided to the Investment Committee and the reason for the same shall be recorded in writing. The Investment Committee shall then decide on the course of action. Provided further and subject to the above, any change in the asset allocation affecting the investment profile of the Scheme shall be effected only in accordance with the provisions of sub regulation (15A) of Regulation 18 of the SEBI (MF) Regulations.

(vi) Further, the above allocation may vary during the duration of the Scheme. Some of these instances are: (i) coupon inflow; (ii) the instrument is called or bought back by the issuer (iii) in

	 anticipation of any adverse credit event etc. In case of such deviations, the Scheme may invest in Bank CDs having highest ratings (i.e. A1+ or equivalent) / CBLOs / T-Bills/ Repo & Reverse repo in Government Securities. Deviation, if any, due to such instances, may continue till maturity, if suitable NCDs / CPs of desired credit quality are not available. (vii) Further, in line with investment strategy, where the fund manager sells portion of equity shares in portfolio and considers to reinvest/redeploy such proceeds, the upper limit of the intended range
	w.r.t investment in equity and equity related instruments as above shall not be applicable and such breach may continue, provided the reinvestment / redeployment is made only in equity shares to the extent of sales proceeds realised from such sell transaction(s). Further, the said proceeds realised out of such sell transaction may be invested in Bank CDs having highest
	ratings (i.e. A1+ or equivalent) or CBLOs / Government Securities / T-Bills for period of 30 days from and including the date of such sell transaction if in the opinion of the Fund Manager the general market conditions are not favourable and/or suitable investment opportunities are not available for deployment of funds into equity shares. For any investments to be made post expiry of such 30 days into equity and equity related instruments, the intended range as specified above shall be adhered to.
	 (viii) Further, in the event of any deviations below the minimum limits or beyond the maximum limits as specified in the above table, the Fund Manager shall rebalance the portfolio within 30 days from the date of said deviation. Accordingly, investors should note that there will not be any variation between the intended
	 portfolio allocation and the final portfolio allocation apart from the exceptions as mentioned under clauses (iii), (iv), (v),(vi) and (vii) above. (ix) The Scheme shall not invest in unrated debt instruments. For this purpose, unrated debt securities shall exclude instruments such as CBLO, Reverse Repo, short term deposit to which
	rating is not applicable.(5) Reporting: After the closure of NFO, the AMC will report in the next meeting of AMC/ Trustees, the publicized percentage allocation and the final portfolio.
Investment Strategy	The scheme follows a passive investment strategy for the fixed income component of the Scheme. The corpus of the equity component of the scheme will be primarily invested in diversified equity and equity related securities of the companies that have a potential to appreciate in the long run to achieve the market linked appreciation (upside) and premium of exchange traded options.
Risk Profile of the Scheme	Mutual Fund Units involve investment risks including the possible loss of principal. Please read the Scheme Information Document carefully for details on risk factors before investment. Scheme Specific Risk Factors are summarized below:
	 Risk Factors associated with investments in Fixed Income Securities: Price-Risk or Interest-Rate Risk: Fixed income securities such as bonds, debentures and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or demension in the prices.
	 decrease in the level of interest rates. Credit Risk: In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down. It must, however, be noted that where the Scheme has invested in Government securities, there is no credit risk to that extent.
	 Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market. Reinvestment Risk: Investments in fixed income securities may carry reinvestment risk as interest
	 Remvestment Risk. Investments in fixed income securities may carry remvestment fisk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate. Pre-payment Risk: Certain fixed income securities give an issuer the right to call back its
	securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.
	 Concentration Risk: The Scheme portfolio may have higher exposure to a single sector, subject to maximum of 25% of net assets as specified, depending upon availability of issuances in the market at the time of investment, resulting in higher concentration risk. Any change in government policy / business environment relevant to the sector may have an adverse impact on the portfolio.
	 Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds, which are AA rated, are comparatively more risky than bonds, which are AAA rated.

Risk factors associated with investments in equity securities:
 Equity investments by nature are volatile and prone to price fluctuations on a daily basis due to both macro and micro factors.
 The NAVs of schemes investing in equity will fluctuate as the daily prices of the individual securities in which they invest fluctuate and the units when redeemed may be worth more or less
 than their original cost. The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or policies of any appropriate authority and other political and economic developments and closure of stock exchanges which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the units of the Scheme may fluctuate and can go up or down.
 In respect of investments in equity, there may be risks associated with trading volumes, settlement periods and transfer procedures that may restrict liquidity of investments in equity securities.
 Investors may note that Fund Manager's investment decisions may not always be profitable, as actual market movements may be at variance with anticipated trends.
 Though the constituent stocks of most indexes are typically liquid, liquidity differs across stocks. Due to the heterogeneity in liquidity in the capital market segment, trades on this segment may not get implemented instantly.
 Investment decisions made by the AMC may not always be profitable, even though it is intended to generate capital appreciation by actively investing in equity and equity related securities. Investors therefore will have to accept the returns generated by the underlying equity investments of the scheme which may be unfavourable at the time of maturity of the scheme.
Risk Factors associated with Investments in Derivatives:
 As and when any Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives to correlate perfectly with underlying assets, rates and indices. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Besides the price of the underlying asset, the volatility, tenor and interest rates affect the pricing of derivatives. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. Derivative trades involve execution risks, whereby the rates seen on the screen may not be the rate at which ultimate execution takes place. The options buyer's risk is limited to the premium paid, while the risk of an options writer is unlimited. However, the g
 Risk Factors associated with Listing of units: Listing of units of the scheme on stock exchange(s) does not necessarily guarantee liquidity and
there can be no assurance that an active secondary market for the units will develop or be maintained.

	 Trading in the units of the Scheme on the Exchange may be halted because of market conditions, including any halt in the operations of Depository Participants or for reasons that in view of the Exchange Authorities or SEBI, trading in the units is suspended and / or restricted. In addition, trading in units is subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange rules of 'circuit filter'. There can be no assurance that the requirements of Stock Exchange necessary to maintain the listing of units of scheme will continue to be met or will remain unchanged. Further, the Scheme being a close ended scheme and listed on stock exchange, as per SEBI guidelines, no redemption / repurchase / switches of units will be allowed prior to maturity under the scheme. The investors wishing to redeem their units may do so through stock exchange mode. The Units of the scheme may trade above or below their face value / NAV. The NAV of the scheme will fluctuate with changes in the market value of schemes holdings. The trading prices of units of the scheme will fluctuate in accordance with changes in their NAV as well as market supply and demand which may even lead the units to quote at significant premium or discount to NAV. There is a possibility that the unitholders find it difficult or uneconomical to liquidate their investments at any particular time. As a result, investors in the scheme must be prepared to hold the units or esult in wider premium/ discount to the NAV of the Schemes. Although the Units are proposed to be listed on the Stock Exchange, or due to connectivity problems with the depositories due to the occurrence of any event beyond their control. As the units of the scheme may be held in electronic (demat) mode through depositories, the records of the depository shall be final with respect to the number of units available to the credit of unitholder. Settlement of trades, redemption/divided payment, in lieu of such units held i
Risk Control Strategies	 Risk Factors associated with Close Ended Schemes: A close ended Scheme endeavours to achieve the capital appreciation only at the scheduled maturity of the Scheme. However, there is no assurance that the said objective will be achieved at the scheduled maturity of the scheme and there is a risk that the capital invested may not be fully realisable upon maturity of the scheme. Moreover, given the uncertain nature of equity markets, the AMC may be required to liquidate the equity portfolio and the proceeds may be kept in cash and invested largely in cash equivalents/money market instruments towards the Maturity/Final Redemption date and to that extent these investments made may not be in line with the asset allocation pattern. Investors who wish to exit/redeem before the scheduled maturity date may do so through the stock exchange mode. For the Units listed on the exchange, it is possible that the market price at which the Units are traded may be at a discount to the NAV of such Units. Hence, Unit Holders who sell their Units in a Scheme prior to maturity may not get the NAV returns. Investments made by the scheme would be in accordance with the investment objectives of the scheme and provisions of SEBI (MF) Regulations. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. The risk control process involves reducing risks through portfolio diversification, taking care however not to dilute returns in the process. The AMC believes that this diversification would help achieve the desired level of consistency in returns. The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous indepth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC.
	 Credit Risk Every investment in Debt and Money Market Instruments of any issuer would be made in accordance with Credit policy as defined and established by AMC from time to time. The Credit Policy, which is reviewed and monitored on a regular basis by Investment Committee, inter alia, enumerates issuer selection process, the various parameters to be considered for setting up credit exposure limits and Credit authorisation matrix for such limits, credit monitoring process etc. The following parameters shall be considered for selection: (i) The exposure to a counter party is based on the networth of the counterparty. The fund manager would do a risk assessment of the issuer before making the investments. Further, continuous monitoring of the networth of the company is done. The risk assessment by the fund manager includes the monitoring of the following: Capital Structure Debt Service coverage ratio

	III. Interest coverage IV. Profitability margin
	V. Current ratio
	 (ii) The fund managers determine the sector to which the counter party relates. The fund managers assigns risk weightages to sectors and shall not invest in sectors which carry a high credit risk. The risk weightages are based upon various factors like the nature of products/services of the
	sector, current state and future outlook for the sector, subsidies provided to the sector and government regulations for the sector.
	(iii) The fund manager shall also check the track record of the company in terms of its financials and any defaults to its creditors.
	(iv) The fund managers shall consider the track record of the sponsor/ parent of the counterparty. It includes the financials of the sponsor/ parent company and whether the parent/sponsor has defaulted in the past.
	(v) The fund manager can also have a call with the Management of the company as a part of its research of the company.
	(vi) The fund manager will also check for Credit Default Swaps spreads of the company in global market, if any available.
	The above parameters are dependent upon the information available at the time of due diligence. The fund manager shall endeavour to include all these parameters but investors should note that these parameters are indicative and can change from time to time at the discretion of the fund manager.
	Price-Risk or Interest-Rate Risk
	The fund will invest in a basket of debt and money market securities maturing on or before maturity of the fund with a view to hold them till the maturity of the fund. While the interim NAV will fluctuate in response to changes in interest rates, the final NAV will be more stable. To that extent the interest rate risk will be mitigated at the maturity of the scheme.
	Deinvestment Diek
	Reinvestment Risk Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value.
	Concentration Risk
	The Fund Manager shall endeavor to mitigate the risk by taking exposure to high rated instruments
	and locking in at the point of investment to such issuance yields. While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated.
