<b>Investment Strategy</b>	<p>Scheme seeks to generate income by predominantly investing in equity and equity linked instruments.</p> <p>Scheme aims to identify the price differentials prevailing for a stock / index in 2 market segments (cash, futures, etc.). Trades are executed once the price differentials are identified. Generally, trades will be executed provided that they generate returns higher than short term debt instruments (call money, money market instruments, liquid schemes, etc.) net of expenses.</p>																															

Scheme will buy a stock where it is available cheap and sell the stock where it is quoting at a higher price. Simultaneous buy and sell trade will be entered into in both the market segments (Cash & Futures). Gains that the trade would offer, is identified at the time of execution. On expiry of the futures contract, there is a convergence of price of a stock in cash & derivatives segment. Thus gains are secured / assured irrespective of the market movements, only at the end of the month i.e. on expiry of the futures contract. If these trades are unwound prior to expiry, then they may / may not generate the pre-specified returns.

The scheme shall also undertake Securities Lending and Borrowing within the framework as permitted by SEBI.

However, if these trades fail to exist / if the returns generated are lower than that offered by liquid schemes / index, then the scheme may undertake a higher allocation to debt and money market securities.

A portion of the corpus will also be invested in direct equities, IPO's, Options, open offer and buy-back. Allocation to these strategies will be restricted to the extent of 10% of the corpus size.

#### **Derivative Strategies:**

If and where Derivative strategies are used under the scheme the Fund Manager will employ a combination of the following strategies:

**Index Arbitrage:** As the Nifty 50 derives its value from fifty underlying stocks, the underlying stocks can be used to create a synthetic index matching the Nifty Index levels. Also, theoretically, the fair value of a stock/ index futures is equal to the spot price plus the cost of carry i.e. the interest rate prevailing for an equivalent credit risk, in this case is the Clearing Corporation of the NSE.

Theoretically, therefore, the pricing of Nifty Index futures should be equal to the pricing of the synthetic index created by futures on the underlying stocks. However, due to market imperfections, the index futures may not exactly correspond to the synthetic index futures. The Nifty Index futures normally trades at a discount to the synthetic Index due to large volumes of stock hedging being done using the Nifty Index futures giving rise to arbitrage opportunities.

The fund manager shall aim to capture such arbitrage opportunities by taking long positions in the Nifty Index futures and short positions in the synthetic index. The strategy is attractive if this price differential (post all costs) is higher than the investor's cost-of-capital.

#### **Objective of the Strategy**

The objective of the strategy is to lock-in the arbitrage gains.

#### **Risks Associated with this Strategy**

- Lack of opportunity available in the market.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place.

**Cash Futures Arbitrage:** The Plans under the scheme would look for market opportunities between the spot and the futures market. The cash futures arbitrage strategy can be employed when the price of the futures exceeds the price of the underlying stock.

The Plans will first buy the stocks in cash market and then sell in the futures market to lock the spread known as arbitrage return. Buying the stock in cash market and selling the futures results into a hedge where the Plans have locked in a spread and is not affected by the price movement of cash market and futures market. The arbitrage position can be continued till expiry of the future contracts. The future contracts are settled based on the last half an hour's weighted average trade of the cash market. Thus there is a convergence between the cash market and the futures market on expiry.

This convergence helps the Plans under the Scheme to generate the arbitrage return locked in earlier. However, the position could even be closed earlier in case the price differential is realized before expiry

or better opportunities are available in other stocks. The strategy is attractive if this price differential (post all costs) is higher than the investor's cost-of capital.

**Objective of the Strategy**

The objective of the strategy is to lock-in the arbitrage gains.

**Risk Associated with this Strategy**

- Lack of opportunity available in the market.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place

**Hedging and alpha strategy:** The fund will use exchange-traded derivatives to hedge the equity portfolio. The hedging could be either partial or complete depending upon the fund managers' perception of the markets. The fund manager shall either use index futures and options or stock futures and options to hedge the stocks in the portfolio.

The fund will seek to generate alpha by superior stock selection and removing market risks by selling appropriate index. For example, one can seek to generate positive alpha by buying an IT stock and selling Nifty IT Index future or a bank stock and selling Bank Index futures or buying a stock and selling the Nifty Index.

**Objective of the Strategy**

The objective of the strategy is to generate alpha by superior stock selection and removing market risks by hedging with appropriate index.

**Risk Associated with this Strategy**

- The stock selection under this strategy may under-perform the market and generate a negative alpha.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place

**Covered Call Strategy:** The fund manager shall use the covered call strategy by writing call options against an equivalent long position in the underlying security thereby locking in the returns instead of keeping the position open.

This strategy allows fund managers to earn premium income in addition to returns locked in from the long underlying.

**Objective of the Strategy**

The objective of the strategy is to earn the option premium.

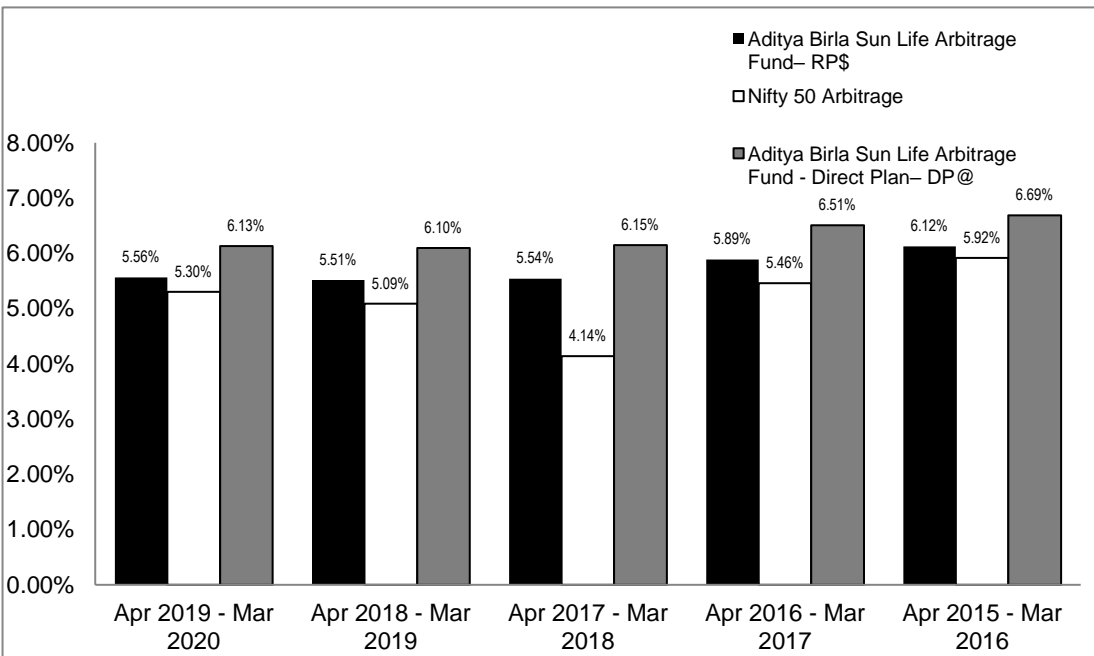

**Risk Associated with this Strategy**

- The underlying security may fall by more than the option premium earned, thereby exposing the strategy to downside risks.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place.

	<p><b>Covered Put Strategy:</b> If the Fund Manager has a bearish view on a stock /index, he may write put option on that stock/index with an equivalent short position in the futures of the underlying; thus earning the premium income.</p> <p><b>Objective of the Strategy</b> The objective of the strategy is to earn the option premium.</p> <p><b>Risk Associated with this Strategy</b></p> <ul style="list-style-type: none"> <li>• The underlying security may rise by more than the option premium earned, thereby exposing the strategy to downside risks.</li> <li>• The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.</li> <li>• Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place.</li> </ul> <p><b>Other Derivative Strategies:</b> As allowed under the SEBI guidelines on derivatives, the fund manager will employ various other stock and index derivative strategies by buying or selling stock/index futures and/or options.</p> <p><b>Objective of the Strategy</b> The objective of the strategy is to earn low volatility consistent returns.</p> <p><b>Risk Associated with this Strategy</b></p> <ul style="list-style-type: none"> <li>• The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.</li> </ul> <p>Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place.</p>
<p><b>Risk Profile of the Scheme</b></p>	<p>Mutual Fund Units involve investment risks including the possible loss of principal. Please read the Scheme Information Memorandum (SIM) carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:</p> <ul style="list-style-type: none"> <li>• The scheme will aim to generate absolute returns over and above money market returns/liquid funds. The performance of the scheme will depend on the ability of the fund manager to identify opportunities prevailing in terms of price spread (difference) in the cash and derivative market. No assurance can be given that Fund Manager will be able to locate investment opportunities or to correctly exploit price spread in the equity markets. There may be instances where the price spread between cash and derivative market is insufficient to meet the cost of carry. In such situations, the Fund Manager due to lack of opportunities in the derivative market may not be able to outperform liquid/money market funds. In addition to this, there can be increase in number of transactions as the fund manager has to take simultaneous calls in cash and derivative market, which may lead to high portfolio turnover and consequently will lead to high transaction costs.</li> <li>• There can be no assurance or guarantee that the arbitrage opportunities may exist at all times in the capital market. The lack of arbitrage opportunities shall not provide an opportunity to the Fund Manager to exploit price discrepancies in the capital markets.</li> <li>• Though the constituent stocks of most indexes are typically liquid, liquidity differs across stocks. Due to the heterogeneity in liquidity in the capital market segment, trades on this segment do not get implemented instantly. This often makes arbitrage expensive, risky and difficult to implement.</li> <li>• The Fund intends to take advantage of opportunities arising out of corporate events like open offers, buy-back, merger, initial public offers, etc. The lack of such corporate events may lead to lack of opportunities to the Fund Manager.</li> </ul>
<p><b>Risk Control</b></p>	<p>Investments made by the Scheme would be in accordance with the investment objectives of the scheme and provisions of SEBI Regulations. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. The risk control process involves reducing risks through portfolio diversification, taking care however not to dilute returns in the process. The AMC believes that this diversification would help achieve the desired level of consistency in returns. The AMC aims to identify securities, which offer superior levels of yield at lower</p>

	<p>levels of risks. With the aim of controlling risks, the investment team of the AMC will carry out rigorous in-depth analysis of the securities proposed to be invested in.</p> <p>The Scheme may also use various derivatives products for the purpose of trading, hedging and portfolio balancing from time to time, with an attempt to protect the value of the portfolio and enhance Unitholders' interest.</p> <p>While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated.</p>																																				
<b>Plans/Options</b>	<p>The Scheme will have <b>Regular Plan and Direct Plan**</b> with a common portfolio and separate NAVs. Investors should indicate the Plan for which the subscription is made by indicating the choice in the application form.</p> <p>Each of the above (Regular and Direct) Plan under the scheme will have the following Options:</p> <p>(1) <b>Growth</b> Option and (2) <b>Dividend</b> Option (Payout / Reinvestment / Sweep Facility)</p> <p><b>**DIRECT PLAN:</b></p> <p>i. <b>Direct Plan is only for investors who purchase /subscribe Units in a Scheme directly with the Mutual Fund and is not available for investors who route their investments through a Distributor.</b></p> <p>ii. <b>Eligible investors:</b> All categories of investors (whether existing or new Unitholders) as permitted under the Scheme Information Document of the Scheme are eligible to subscribe under Direct Plan.</p> <p>iii. <b>Modes for applying:</b> Investments under Direct Plan can be made through various modes offered by the Mutual Fund for investing directly with the Mutual Fund including through Stock Exchange Platforms [except other Platform(s) where investors' applications for subscription of units are routed through Distributors].</p> <p>iv. <b>How to apply:</b></p> <p>a.
