Investment Strategy	The fund would follow a value investing strategy for the management of its portfolio.
	Value investing is buying into stocks that are trading for less than their intrinsic value - stocks that the market is undervaluing. Typical value investing strategies include, strategies like:
	Buying stocks with a low price to book value,
	Low price to cash flow,
	Low price/earnings multiple, and high dividend yields,
	Asset Replacement,
	Dividend Yield higher than the G-Sec yield,
	• Valuation mismatch due to invisible/ undervalued assets (Land, Licenses, Brands, Trademarks, Patents etc.)
	Situations wherein the value of the Company would be unlocked due to:
	- Mergers and Acquisition activities
	- Restructuring
	- Recovery potential
	- Retained earnings
	Value Investing is similar but not the same as contrarian investing. The key difference between contrarian investing and Value Investing is that in latter there is a gap between underlying value of the company (asset, earnings or holding value) and the market perception of the same. In case of contrarian investing, the stock is out of favor and is trading at a valuation lower than its recent past and not necessarily at a discount to its inherent value.
	Key underlying assumption in Value Investing is that markets are inefficient and over a period of time the market will discover and find the right value for the stock.
	Value strategy, is a conservative way of investing in Equities. The primary reason is that these stocks are already available at a substantial discount relative to the general market levels. As such the downside in such stocks is relatively lesser.
	The value strategy, while being a blend of Top down and Bottoms up, essentially focuses on companies with long track records and excellent managements. As such the probability of these companies to improve their fundamentals with changing business dynamics is relatively strong.
	Buying Approach
	Through fundamental analysis, business underlying the security is assessed vis-à-vis its intrinsic value. Some of the factors that are studied are:
	- Financial Statements of the Company's
	- Position in the earnings cycle
	- Competitive position and management quality.
	In addition, we will focus on long-term and cyclical industry trends in order to identify and measure the risks associated with a Company's business. By taking a disciplined approach to security selection, portfolios can yield good long-term total returns. Once a stock is identified as relatively undervalued, the Fund Manager performs additional Fundamental Analysis to determine if there is a sufficient catalysts available to unlock the hidden value within reasonable time. The strategy is broadly diversified across all sectors and not just invested in out-of- favor value sectors
	Selling Approach
	Stocks bought in Value Investing will be sold when stock appreciates to target price without commensurate increase in intrinsic value. However, if the anticipated catalyst(s) fails to happen within a reasonable period, or an unanticipated event, change in fundamentals, or deterioration in intrinsic value negating original reason for investment then also the stock will be sold.
Risk Profile of the Scheme	Mutual Fund Units involve investment risks including the possible loss of principal. Please read the Scheme Information Memorandum (SID) carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:
	The Scheme proposes to invest in equity and equity related securities on the basis of value investment strategy. Equity securities by nature are volatile and prone to price fluctuations on a daily basis due to

		nicro factors. Further, the se Fund Manager to appreciate		neme may take longer than the is of the scheme adversely.
